

**Topic**

**Untitled #1**

- ☐ 15:38-15:54 - trying to get machine working - not part of session
- ☐ problems opening - redo
- ☐ consider approaches 15:54 to 16:05 - 9 minutes
- ☐ Pause 16:05 - need to talk with Rob. Opportunity to get spector in machine ready for next test.
- ☐ diagnose bug noticed during pause: 24/02/2008 21:35:16 to 24/02/2008 22:56:00 - took 1:21
- ☐ pasting a map with children seems to double - as if children pasted, and node+children pasted as child
- ☐ ¿ Does this happen with depth of children/siblings?
- ☐ ¿ Does it work properly with just branches being pasted?
- ☐ Are existing branches in 'into' map affected? (assuming center is selected on 'into' map)
- ☐ Does select all+copy differ in behaviour from select center + copy?
- ☐ Log up other issues from session
- ☐ Finish at 24/02/2008 22:56:00
